

MARCH 2018

MORE ON THE WAY!

When drilling for crude oil there is often an initial release which is caused by pressure in the well. This huge gush of oil can be so powerful that in the past it would even force the drill out of the ground and shoot the black liquid hundreds of feet up in the air. Nowadays it is controlled by pressure systems in capped wells. But despite the damage it was a good sign for the oil men. *It meant there was more to come.*

That's like the resurrection of Jesus Christ. When our Saviour rose from the dead, that didn't mean the resurrection was now a thing of the past, but rather a certainty of the future. The Bible puts it like this: ***“And God both raised up the Lord and will also raise us up by His power” (1 Corinthians 6:14).*** His resurrection means there is more to come. And in particular, the resurrection of believers who are looking to His death on the cross to save them from sin. Does that include you? It could, you know... Repent of your sin and trust in Him.
