

Scientists Who Believe the Bible

Michael Tigges is a Senior Aerospace Engineer at NASA Johnson Space Centre, America – a receiver of the NASA Exceptional Achievement Medal. He has published papers on landing spacecraft on both the Moon and Mars. *And he is a Bible believing Christian.*

Those who say that science has made the Bible redundant would do well to consider his testimony. He carries his Bible to work every day and has said in an interview: *“I am excited that science supports the Biblical teaching that the heavens were created by a loving God who decided, only a short time ago, to initiate conditions for a relationship with creatures He created in His likeness; and I am excited that, in spite of the marring of the originally perfect creation because of Adam’s sin, I, one of his fallen descendants, am permitted to make a personal decision within my short lifespan that will have eternal consequences.”* The decision? To trust in Christ.
